ABOUT

215

Architecture Projects are a reflection of our society. Everything is important from the big picture to the smallest detail in architecture. Since every single piece is playing a part in the masterpiece, every movement will cause dissonance in the end.

ERM Project has been operating since 2018. **ERM Project** has undertaken hotel and villa projects in many parts of the world.

In this process, in addition to the successful delivery of construction and decoration works, it is currently continuing its projects in the hotel and mass housing areas.

ERM Project aims to be the best in its field by producing practical and rational solutions with its experienced and experienced staff who work meticulously on all projects undertaken in Africa, England, Europe and the Middle East. In projects, it follows a company profile that offers the most accurate solution to its customers without compromising on reliability and quality, applies its prescriptive and technical knowledge at every stage of the work, and accepts the correct evaluation of the time until the delivery process of the work as a principle. **ERM Project** aims to offer the best to its customers with its modern construction, superior architecture and engineering understanding by following all the technological developments in the sector.
